

OPTIONS		
Description	Illustration	Details
Leakage sensor		The liquid level sensor provides a digital output that denotes the presence of liquid in the motor housing.

ACCESSORIES		
Description	Illustration	Details
Pulsation damper		This versatile pulsation damper reduces hydraulic pressure pulsations and vibrations in hoses and pipes. It helps to remove pulsation which prevents the system from functioning correctly. It also protects instrumentation connected after the pump.
Mounting plate		Enabling additional mounting options. Screws included in the set.
Mounting clamp		Additional fixing possibility by means of a pipe clamp on the pump.

The performance values for the series models shown on this data sheet were determined under test conditions. The actual performance values may differ and depend in particular on the usage conditions and therefore on the specific application, on the parameters of the components involved in the user's system and on any technical modifications carried out which deviate from the standard configuration or the as delivered condition.

If individual designs have been created for specific customers on the basis of series models, other technical performance data may apply. Before operation begins, the relevant operating instructions and/or assembly or installation instructions should be read and the safety information contained in these instructions should be noted. KNF reserves the right to make changes to the product and the associated documentation without prior notice to the customer.
